Carlsberg Breweries A/S

Update following rating upgrade to Baa1

Summary

[Carlsberg Breweries A/S](#)' Baa1 rating is supported by the company's large scale as the world's fifth largest brewer by revenue and third-largest by volume, with leading positions in some key European and Asian markets; its track record of generating strong cash flow; the strong fundamentals of the beverage industry; and our expectation that the company will maintain credit metrics in line with the level required for the rating. The company has successfully grown outside of its domestic markets in recent years, improving its geographical diversification, while maintaining a prudent financial policy.

However, Carlsberg's rating is constrained by its weaker diversification than that of some of its peers; potential volatility in results in emerging markets; the low-growth environment in developed markets; the current softness in consumer spending; and ongoing shareholder distributions and potential bolt-on acquisitions, which might slow down leverage reduction. Although the exit from Russia reduces somewhat Carlsberg's exposure to riskier markets, reliance on Asia has increased in recent years, exposing the company to potential foreign-currency volatility.

Exhibit 1

We expect Carlsberg's leverage to reduce towards 2.3x-2.4x over the next 12-18 months
 Moody's-adjusted Debt/EBITDA

Starting from 2021, data excludes Russian operations, reported separately as held for sale. Leverage as of year-end 2023 was inflated by some debt pre-funding. All figures and ratios are based on adjusted financial data and incorporate Moody's Global Standard Adjustments for Non-Financial Corporations. Periods are financial year-end unless indicated. Credit strengths

- » Positive fundamentals of the beverage industry
- » Carlsberg's position as the third-largest brewer in the world by volume, with solid market positions in Europe
- » Increasing presence in Asia, which improves growth prospects
- » Strong cash flow and commitment to maintain reported net debt/EBITDA below 2.0x

Credit challenges

- » Reduced visibility into future performance because of still-weak consumer confidence in Europe and slower growth in China
- » Exposure to the low-growth environment in developed markets and potential volatility in operating performance in emerging markets
- » Ongoing shareholder distributions and potential bolt-on acquisitions

Rating outlook

The stable rating outlook reflects our expectation that notwithstanding the softness in consumer spending and the increased commodity costs, Carlsberg's credit metrics will remain strong, and that the company will continue to pursue a conservative financial policy, adjusting its share buybacks according to its operating performance.

Factors that could lead to an upgrade

Carlsberg's narrower geographic diversification than some of its peers and still relatively high reliance on emerging markets limit upward rating pressure. Success in further consolidating its position in key Asian markets while maintaining solid credit metrics could eventually result in a rating upgrade. Upward pressure could develop if the company maintains its Moody's-adjusted retained cash flow/net debt above 25% and its Moody's-adjusted debt/EBITDA below 2.25x.

Factors that could lead to a downgrade

Downward pressure could develop on Carlsberg's rating if operating underperformance, large debt-financed acquisitions or more aggressive shareholder remuneration policies cause a deterioration in credit metrics, such as retained cash flow/net debt falling below 15% or Moody's-adjusted gross debt/EBITDA rising well above 3.0x on a sustained basis. A sustained weakening in the liquidity profile could also lead to downward pressure on the rating.

Profile

Carlsberg Breweries A/S is the world's fifth-largest brewer by revenue and third-largest by volume. The company produces and distributes a wide range of beer brands (including Carlsberg, Tuborg, Kronenbourg 1664 and Grimbergen, and regional premium brands such as Beerlao and Huda), soft drinks and bottled water, mainly across Europe and Asia. In 2023, Carlsberg reported net revenue of DKK73.6 billion (around €9.9 billion) and EBITDA of DKK15.2 billion (around €2.1 billion), both excluding contribution from Russian operations, which were reported separately as held for sale and disposed in July 2023.

Carlsberg is fully owned by Carlsberg A/S, which is listed on the Danish stock market, with a market capitalisation of DKK129 billion in March 2024. The Carlsberg Foundation is the largest shareholder of Carlsberg A/S, with a 29% stake and 77% voting rights, and de facto control over Carlsberg.

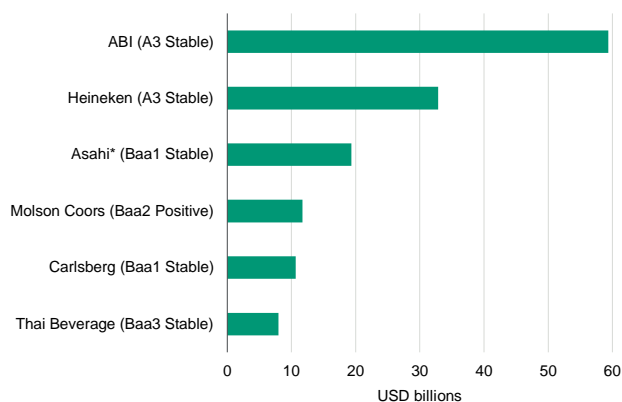

Detailed credit considerations

Position as the world's fifth-largest brewer by revenue supports a strong business profile

With net revenue of DKK73.6 billion and total volume of 125.1 million hectolitres in 2023, Carlsberg is the world's fifth-largest brewer by net sales and third largest by volume (see Exhibits 4 and 5). The company remains significantly smaller in volume and revenue vis-à-vis competitors such as [Anheuser-Busch InBev SA/NV](#) (A3 stable) and [Heineken N.V.](#) (A3 stable), but its competitive strength is supported by its strong foothold in Europe, particularly in Nordic countries, and in a number of Asian markets.

Exhibit 5

Carlsberg is the third-largest brewer in terms of total global volume 2022 global market share by total volume

Source: Euromonitor

The company focuses on 21 countries in which it holds either the number one or two position, including the Nordic region, the Baltic states, Switzerland, France, and a few Asian markets such as Western China, Nepal, Hong Kong and Laos.

Although Carlsberg has higher geographical concentration than that of some of its larger peers, over the last decade the company has improved its geographical diversification through a combination of organic growth and bolt-on acquisitions. Carlsberg has expanded significantly in Asia, which became the largest contributor to the company's revenue and operating profit (see Exhibits 6 and 7). Carlsberg's presence in Asia offers higher-than-average growth rates in both volume and sales, driven by favourable demographics, growing consumption of premium products and increasing disposable income. However, emerging market exposure comes at the expense of more volatile market conditions and less predictable regulatory environments; in addition, weak emerging market currencies have a negative translational impact on Carlsberg's earnings. Lower growth in some Asian markets in particular could result in softer results over the next 12-18 months.

Following the company's decision to exit Russian operations, Central Eastern Europe division accounts for less than 20% of its total revenue. The exit reduces the company's exposure to a volatile market, but it will also reduce the long-term growth potential offered by the region.

Carlsberg's core portfolio of beer brands comprises more than 20 key brands, including Carlsberg, Tuborg and Kronenbourg 1664. These brands have helped reinforce the group's brand equity internationally and regionally. In addition, Carlsberg produces premium beers and alcohol-free brews, which have higher volume growth rates than those of other beer categories and benefit from higher profitability.

Progressive top line and profit growth in 2024, although consumer sentiment remains low

Despite the still-low consumer confidence, higher input costs and its decision to exit Russia, Carlsberg's performance was relatively good in 2023, with gains in Asia offsetting weaker volumes in both Western and Central and Eastern Europe. Carlsberg's top line benefitted from still steeper price increases, which also compensated for higher costs and a degree of volume attrition, with the company reporting broadly stable operating profit in 2023. In 2024, we expect low-single-digit revenue growth in percentage terms, supported by a degree of recovery in volume thanks to increase in marketing investments. The company's renewed emphasis on its Sail '27 expansion programme, which focuses on growing the premium portfolio, the non-alcohol component of its portfolio, and expanding in Asia will also support its medium-term target of organic revenue growth of around 4%-6%.

Margins strained by cost inflation; any significant recovery in 2024 will be strained by increase in marketing investments, particularly to grow in Asia

Although Carlsberg hedges its raw material costs and is normally able to pass through increase in costs to consumers, the exceptional input cost inflation, including for commodities, energy, packaging and logistics, since 2022 has hurt the company's profitability in both 2022 and 2023. Over the last two years, Carlsberg's profitability (Moody's-adjusted EBITDA margin) decreased significantly, contracting by almost 290 basis points. This was largely because of higher raw material and energy costs, and a step-up in marketing expenditure in 2023 to support top line. Although margin deterioration is typical at a time of high cost inflation, in absolute terms, the company's EBITDA remained broadly stable. We expect the company to successfully recover some of the lost margins over the next 12-18 months as consumers get used to the higher costs and the premiumisation trend, typical of the alcoholic beverage industry, resumes. However, the company's intention to maintain high investment in marketing expenses to support expansion in Asia, particularly in Vietnam and China, might somewhat erode the expected profitability improvement.

Strong cash flow compensates for share buybacks; credit metrics likely to remain supportive of the rating

Carlsberg's cash generation remains solid. With around DKK12 billion-DKK13 billion of cash from operations, modest working capital volatility, around DKK4.7 billion of capital spending and DKK4.8 billion of annual dividends (including minorities), we expect the company's free cash flow (FCF) to remain positive and partially compensate for share buybacks over the next 12-24 months. Positively, buybacks would likely be sized depending on operating performance and cash generation every quarter, so we expect their impact on the company's credit metrics to be eventually neutral.

In this context, the company's financial policy of maintaining its net leverage (reported net debt/EBITDA) below 2.0x (1.47x as of year-end 2023) is favourable. While the company's net debt/EBITDA of 2.0x normally translates into Moody's-adjusted debt/EBITDA of around 2.5x, as of December 2023, Moody's adjusted gross debt ratio of 3.1x was inflated by the pre-funding of the company's upcoming maturity in May 2024. As a result, both the company's gross debt and cash positions were inflated by around DKK7 billion, which we expect to be only temporary. Removing this effect, Moody's-adjusted leverage ratio was 2.6x. As profit and cash generation remain solid, we expect financial leverage, on a Moody's-adjusted basis, to decline towards 2.2x-2.4x over the next 18-24 months.

We also note the ongoing dispute about the possible valuation of a put option to acquire a minority stake in the company's Indian and Nepalese business. We have assumed that the company will exercise the option towards the end of the year, partially financing this with new debt. The exercise of the put options, however, will result in lower adjustments to debt as we currently consider the put options as contingent liabilities. Overall, we do not expect a major impact from this acquisition.

ESG considerations

Carlsberg Breweries A/S' ESG credit impact score is CIS-2

Exhibit 10

ESG credit impact score

Source: Moody's Ratings

CIS-2 – Carlsberg's ESG Credit Impact Score of **CIS-2** reflects our assessment that ESG attributes overall have a low impact on the rating. Moderate environmental and social risks exist in relation to water management and customer relations. However, the company's sound governance – especially in terms of financial strategy and risk management – despite its concentrated ownership, represents an important mitigant.

Exhibit 11

ESG issuer profile scores

Source: Moody's Ratings

Environmental

E-3. Environmental risks for Carlsberg are in line with other beer manufacturers and mainly reflect the industry's exposure to water management, waste and pollution and its reliance on natural capital in relation to the production of key ingredients for its products. While raw materials typically represent a modest component of the cost structure, alcoholic beverage producers rely on the availability of water and specific ingredients, some of which might be difficult to substitute.

Social

S-4. Like many other alcoholic beverage companies, Carlsberg's social IPS primarily reflects its significant brand reputation risks and exposure to responsible marketing and distribution related to the sale of alcoholic beverages. While alcohol concentration by volume is significantly lower in beer than in spirits, both brewers and spirits producers have exposure to alcohol-related risks. This is partially mitigated by very clear labeling and disclosure about the risks of excessive consumption of alcoholic products, and the focus on appropriate marketing and on responsible drinking. In addition the company's alcohol free offering is growing rapidly albeit this still represents a small contribution to overall revenue.

Governance

G-2. Carlsberg's governance risks reflects its conservative financial policies, overall sound governance practices and long track record in growing the business maintaining modest leverage, which compensate for its concentrated ownership. Despite being publicly traded, Carlsberg's governance is influenced by the fact that the company remains controlled by the Carlsberg Foundation.

Liquidity analysis

Carlsberg's liquidity is good, underpinned by a cash balance of around DKK13.4 billion and deposits of DKK2.2 billion as of year-end 2023, our expectation that the company will continue to generate solid FCF and the company's access to a committed bank facility of €2 billion, maturing in June 2026 and not subject to any financial covenants (fully undrawn as of December 2023). These liquidity sources adequately cover the company's upcoming cash needs including the potential buyout of the Asian minority stake and upcoming bond maturities. Carlsberg has a €1 billion bond due in May 2024, which was already pre-funded as the company issued net debt for €1.55 billion during 2023. Because of the pre-funding, cash balances and deposits as of year-end 2023 were particularly high.

Our assessment of Carlsberg's liquidity also factors in an element of seasonality, with stronger cash flow in the second and third quarters, driven by stronger earnings and lower working capital needs, while the first quarter is normally weaker because of the build-up in inventories and lower earnings. In addition, we acknowledge Carlsberg's high trade payable days, a reduction in which might eventually result in a permanent increase in working capital, with a negative impact on the company's financial leverage. In this respect we note that some of Carlsberg's suppliers use supply chain financing to discount their invoices. Although the disappearance of these agreements might also result in increase in working capital we note that the company has plenty of liquidity resources to cover for such eventuality.

Methodology and scorecard

The scorecard-indicated outcome of Baa1, according to our Alcoholic Beverages methodology, based on forward-looking ratios, is in line with the current rating assigned to Carlsberg. The scorecard-indicated outcome is supported by a mix of Baa/single-A business profile factors and solid credit metrics, which compensate for below-average profitability.
